Inpatient Psychiatric Nursing Linda Damon, MSN, MHA, RN 2012-04-12 Named a 2013 Doody's Core Title! 2012 Second Place AJN Book of the Year Award Winner in Psychiatric-Mental Health Nursing! "This is truly a contribution to the hands-on clinical literature....This book can serve as a resource for nurses working in inpatient psychiatry, nursing students, and nursing faculty who teach undergraduate psychiatric nursing."--Choice: Current Reviews for Academic Libraries "[A] great book for inpatient psychiatric nurses."--Doody's Medical Reviews Psychiatric nursing practice has changed dramatically over the past decades to accommodate vast changes in our health care system. The patients who now meet the level of care standards for an acute care setting have to be very ill and typically exhibit considerable behavioral impairments and multiple safety issues. This handbook for psychiatric nurses and nursing students reflects these changes and focuses on four particularly challenging aspects of acute psychiatric nursing practice: keeping the patient safe, stabilizing symptoms, promoting engagement in treatment, and discharge planning. In a systematic, easy-to-access format, the book offers proven, clinically useful interventions designed to modify and manage disruptive patient behavior. Also included is a chapter on overcoming one's own barriers to effective nursing in the difficult psychiatric environment. This important interdisciplinary clinical resource grew from a forum of Butler Hospital nurses who convened over a two-year period to identify and explore successful interventions used in the inpatient psychiatric acute care setting. The guide represents a collaboration between these health care professionals and their colleagues at the University of Rhode Island McLean Hospital, New York Presbyterian Hospital, and the Institute of Living. Key Features: Provides practice-based evidence and clinically useful interventions designed to modify and manage challenging and disruptive patient behavior Represents interdisciplinary collaborative work among staff nurses, advanced practice nurses, psychiatrists, social workers, occupational therapists, and psychologists Presents clinical practice savvy equally useful to new psychiatric nurses and nursing students Disseminates information in an easy-to-access, consistent format This book is also available as part of a discounted set. Principles and Practice of Psychiatric Nursing Gail Wiscarz Stuart 2005 Principles and Practice of Psychiatric Nursing, 8th Edition provides comprehensive coverage of psychiatric nursing. Beginning with fundamental coverage of all key psychiatric nursing principles, it goes on to address the complete continuum of care - including mental health promotion and illness prevention, crisis intervention, and psychiatric rehabilitation and recovery. The book then applies psychiatric nursing principles to specific clinical disorders based on adaptive-maladaptive coping responses, the six-step nursing process, and DSM-IV-TR and NANDA diagnoses. Subsequent chapters describe various modalities of treatment (psychopharmacology, somatic therapies, cognitive and behavioral therapies, managing aggressive behavior, and more), hospital-based and community-based care, and treatment of special populations. The Stuart Stress Adaptation Model provides a consistent nursing-oriented framework for understanding health and wellness. Evidence-based algorithms are presented in lieu of the less relevant critical pathways found in other texts. The latest American Nurses Association's Standards of Care prepare students for the realities of evidenced-based care in nursing practice. A vibrant, full-color design enhances and enriches students' understanding of essential concepts. Short vignettes in a patient's and family's own words give readers a different perspective of the caregiving process. Case studies present in-depth clinical scenarios that show each step of the nursing process, demonstrating realistic applications of the nursing process. Critical thinking questions interspersed throughout the text encourage independent clinical reasoning. Numerous boxes and tables throughout the book highlight important issues and current topics related to chapter content in visual, easy-to-digest segments. Citing the Evidence boxes provide summaries of recent clinical research, with new boxes added to the Evolve website each month. Nursing Treatment Plan Summaries present care plans, including patient goals with nursing interventions and rationales, to guide nursing care related to the treatment of major disorders. Patient Education Plans and Family Education Plans include key information nurses need to communicate to the patient and family members. Sample Therapeutic Dialogues for nurse-patient interactions demonstrate the difference between therapeutic and nontherapeutic communication. Clinical chapters have been carefully revised and updated to include the latest research and appropriate nursing and medical diagnoses relevant to each disorder. A strengthened family focus and more in-depth discussion of outpatient care reflect current trends in psychiatric nursing. NIC and NOC are introduced in the nursing process chapter (chapter 12) and incorporated as appropriate into disorders chapters. Chapter Focus Points at the end of each chapter provide a comprehensive review of important information. Key terms are defined in the glossary and listed with page references at the end of the chapter in which they appear. A comprehensive list of behavioral rating scales is offered as an appendix for easy reference. A companion CD-ROM offers animations, interactive exercises, review questions for the NCLEX examination, and an audio glossary for additional study and review. A companion CD-ROM offers animations, interactive exercises, review questions for the NCLEX examination, and an audio glossary for additional study and review. New chapters explore the latest trends and relevant topics, including: Families as Resources, Caregivers, and Collaborators (Chapter 11); Family Interventions (Chapter 33) Community-Based Psychiatric Nursing Care (Chapter 35); and Psychological Care of Patients with Life Threatening Illness (Chapter 40).
