Educational Administration and Leadership Identity Formation Eugenie A. Samier 2020-07-31
Educational Administration and Leadership Identity Formation explores approaches and issues that arise in leadership identity formation in a variety of educational contexts. Bringing

together a range of national and international contributions, this volume provides a global perspective on this multi-dimensional topic. This book examines the theoretical foundations relevant to identity and identity formation, and their implications for researching and teaching in educational administration and

leadership. It includes a range of sociological, psychological, political, cultural, and socio--linguistic approaches to examining leadership identity formation. It also addresses models, practices and experiences that vary according to identity politics, cultural difference, and historical and contemporary privilege in leadership identity formation. Working from theoretical and practice-base perspectives, this book will be of great interest for researchers, practitioners, policy-makers and academics, as well as students in teacher education programs and graduate courses in educational administration and leadership, organisational studies, and educational ethics for broad international use.

Multi Variable Calculus

Michael Sullivan
2014-01-01 Michael
Sullivan and Kathleen
Miranda have written a
contemporary calculus
textbook that
instructors will respect
and students can use.
Consistent in its use of
language and notation,
Sullivan/Miranda's
Calculus offers clear
and precise mathematics
at an appropriate level
of rigor. The authors
help students learn
calculus conceptually,
while also emphasizing
computational and
problem-solving skills.
The book contains a wide
array of problems
including engaging
challenge problems and
applied exercises that
model the physical
sciences, life sciences,
economics, and other
disciplines. Algebra-
weak students will
benefit from marginal

annotations that help
strengthen algebraic
understanding, the many
references to review
material, and extensive
practice exercises.
Strong media offerings
include interactive
figures and online
homework.

Sullivan/Miranda's
Calculus has been built
with today's instructors
and students in mind.

Asset Pricing and Portfolio Choice Theory

Kerry Back 2010 This book is intended as a textbook for Ph.D. students in finance and as a reference book for academics. It is written

at an introductory level but includes detailed proofs and calculations as section appendices. It covers the classical results on single-period, discrete-time, and continuous-time models. It also treats various proposed explanations for the equity premium and risk-free rate puzzles: persistent heterogeneous idiosyncratic risks, internal habits, external habits, and recursive utility. Most of the book assumes rational behavior, but two topics important for behavioral finance are covered: heterogeneous beliefs and non-expected-utility preferences. There are also chapters on asymmetric information and production models. The book includes numerous exercises designed to provide practice with the concepts and also to introduce additional results. Each chapter concludes with a notes and references section that supplies references to additional

developments in the field.

Principles of Element Design Peter Rich

2012-10-02 The construction of buildings is learnt through experience and the inheritance of a tradition in forming buildings over several thousand years. Successful construction learns from this experience which becomes embodied in principles of application. Though materials and techniques change, various elements have to perform the same function. 'Principles of Element Design' identifies all the relevant elements and then breaks these elements down into all their basic constituents, making it possible for students to fully understand the

given theory and principles behind each part. As all building projects are subject to guidance through the Building Regulations and British Standards, this book gives an immediate reference back to relevant information to help practitioners and contractors identify key documents needed. Yvonne Dean B.A. (Hons) B.A (Open) RIBA, an architect, energy consultant and materials technologist. She also has 15 years experience as a lecturer, travels widely and is a guest lecturer at many universities. She pioneered an access course for Women into Architecture and Building, which has been used as a template by others, and has been instrumental in helping to change the teaching of technology for architects and designers. Peter Rich AA Dipl. (Hons) Architect, started his career with 14 years experience as a qualified architectural technician. He then joined the AA School of

Architecture, working with Bill Allen and John Bickerdike after his graduation, later becoming a partner of Bickerdike Allen Rich and Partners. He also taught building construction at the Bartlett School of Architecture, University College London, and architectural design at the Polytechnic of North London. He now acts as a Consultant.
